

A452F

CARTONING MACHINE FOR CHEESE & BUTTER

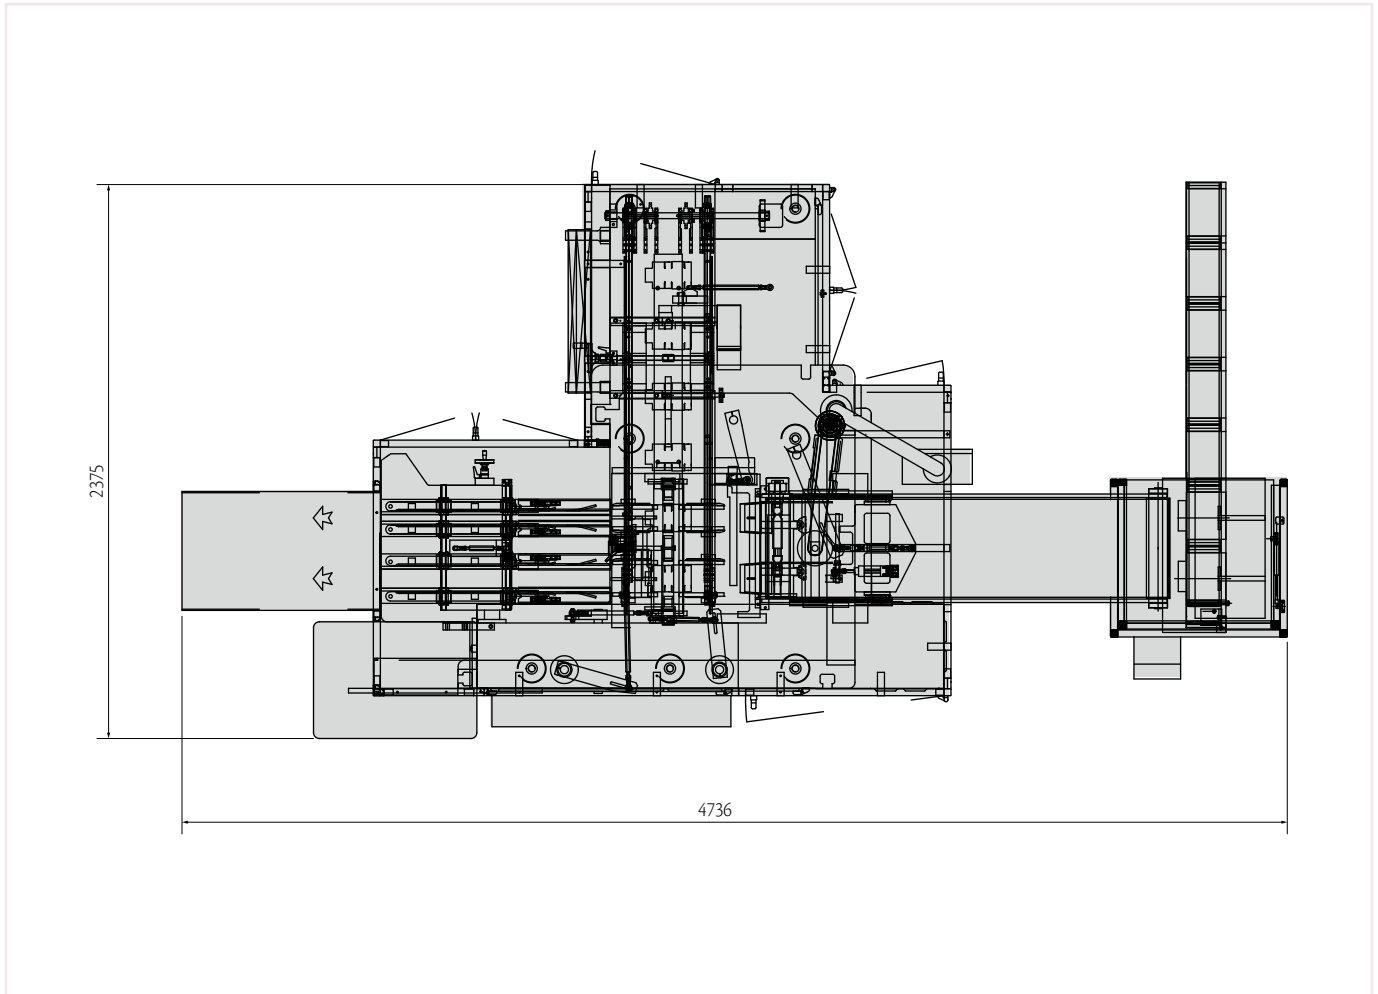

Designed for the cartoning of regular shaped, quadrilateral products such as small cartons, mini butter portions, or large portions of processed cheese, the A452F is a highly reliable, flexible solution from Corazza.

According to customer requirements, the A452F cartoner can be supplied with various types of infeed sections, depending on the product to be handled and on the requested pack configuration. The machine uses flat blank cartons which are formed around the product during the loading operation. A452F is perfectly designed to work in line with FF100 Series equipment.

- Converts simply to different product sizes as required.
- Cost-saving wrap-around system to shape cartons from open flat blanks.
- Damage-proof product handling: cartons pre-formed into an open U-shape in a vertical indexing turret.

TECHNICAL DATA

Production Capacity	80 max. box / min (depending on blank dimension)				
Full Load Current	3P x 400 Volt - 50Hz - 15 Amp (line complete with FF100BP)				
Compressed Air	400 NI/min (min. op. pressure 6 bar)				
Weight	3100 kg approx.				
Box Dimensions	A (min.÷max.)	B (min.÷max.)	C (min.÷max.)	Lanes	Layers
	59 ÷ 150	56 ÷ 75	22 ÷ 62	-	-
